

## 78 Series Regulators

# 1A Output 78 series Regulators

# 500mA Output 78 series Regulators

BA78□□Series, BA78M□□Series

No.12019ECT01

## Description

BA78□□, BA78M□□ series are three-terminal regulators available with several fixed output voltages. It supplies the stable fixed voltage from unstable direct input voltage. The useful output voltage lineup is 5V, 6V, 7V, 8V, 9V, 10V, 12V, 15V, 18V, 20V, 24V with 0.5A / 1A current ability. They have nearly same electric characteristics as competitor products and cover a wide range of application.

## Features

- 1) Built-in over-current protection circuit and thermal shutdown circuit
- 2) High ripple rejection
- 3) Available TO220CP-3, TO252-3 package to a wide range application
- 4) Compatible replacement to competitor products
- 5) Various voltage lineup (5V, 6V, 7V, 8V, 9V, 10V, 12V, 15V, 18V, 20V, 24V)

## Applications

Fixed voltage power supply for TV, Audio components, etc

## Line up

### 1A BA78□□Series

Part Number	5V	6V	7V	8V	9V	10V	12V	15V	18V	20V	24V	Package

●Internal Circuit Structural Diagram

●Protection Circuit

(1)Over-current protection circuit  
When the maximum rating current or more is rushed, it controls the current ability and protects the IC from destruction.

(2) Thermal shutdown circuit  
When the chip temperature of IC exceeds the setting temperature, the IC goes OFF, and it controls the IC not to be destroyed by the heat generation. It can be restored by being lowered the chip temperature of IC below the setting temperature.

(3) Safety operation area control circuit  
It controls the output current in inverse proportion ratio to voltage difference (input-output).  
When voltage difference becomes bigger, the IC will be destroyed in rush current. It protects the IC by controlling the current ability according to the voltage level.

### ● Thermal design

Refer to the following thermal derating curves (Fig. 25, 26), when using in the status of  $T_a=25^\circ\text{C}$  or more.

The characteristic of IC is greatly related to the operating temperature.

When it is used in over maximum junction temperature, the elements inside IC might become weaker and be destroyed. It is recommended to take into consideration thermal of IC.

Note that the temperatures are in the allowed temperature limits and operated within  $P_d$ .

It is necessary to operate it at junction temperature  $T_{j\text{max}}$  or less to prevent IC from the thermal destruction.

Please operate IC within permissible loss  $P_d$  because the junction temperature  $T_j$  might become considerably a high temperature even if ambient temperature  $T_a$  is normal temperature ( $25^\circ\text{C}$ ).

Power consumption  $P_c(\text{W})$  may be expressed by the equation shown below:

$$P_c = (V_{in} - V_o) \times I_o + V_{in} \times I_b$$

permissible loss  $P_d \geq P_c$

$$I_o \leq \frac{P_d - V_{in} \times I_b}{V_{in} - V_o}$$

$V_{in}$  : Input Voltage  
 $V_o$  : Output Voltage  
 $I_o$  : Output Current  
 $I_b$  : Bias current

Maximum Output current  $I_{o\text{MAX}}$  can be calculated in thermal design.

#### • Calculation example

Ex.1)  $T_a=85^\circ\text{C}$ ,  $V_{in}=7.5\text{V}$ ,  $V_o=5.0\text{V}$

$$I_o \leq \frac{1.04 - 7.5 \times 4.5\text{mA}}{7.5 - 5.0}$$

$$I_o \leq 400\text{mA}$$

Using TO220CP-3 alone  
 $\theta_{ja}=62.5^\circ\text{C/W} \rightarrow 16\text{mW}/^\circ\text{C}$   
 $P_d=1.04\text{W}$  at  $85^\circ\text{C}$

Be sure to use this IC within a power dissipation at the range of operating temperature.

### ● Terminal Setting and Cautions

#### • INPUT

It is recommended that a capacitor (about  $0.33\mu\text{F}$ ) be inserted between INPUT and COMMON. The value of capacitor is designed suitable for the actual application.

#### • OUTPUT

It is recommended that a capacitor (about  $0.1\mu\text{F}$ ) be inserted between OUTPUT and COMMON. A tantalum capacitor can also be used for this pin because insufficient capacitors may cause oscillation by a temperature change.

#### • COMMON

Keep the no voltage drop between Ground level of set board and IC.

When there is the voltage difference, setting voltage becomes inaccuracy and unstable.

It is recommended to connect by wide, short pattern, and lower the impedance.

# Notes for use

- (1) Absolute Maximum Ratings  
While utmost care is taken to quality control of this product, any application that may exceed some of the absolute maximum ratings including the voltage applied and the operating temperature range may result in breakage. If broken, short-mode or open-mode may not be identified. So if it is expected to encounter with special mode that may exceed the absolute maximum ratings, it is requested to take necessary safety measures physically including insertion of fuses.
- (2) Ground voltage  
Make setting of the potential of the GND terminal so that it will be maintained at the minimum in any operating state. Furthermore, check to be sure no terminals are at a potential lower than the GND voltage including an actual electric transient.
- (3) Thermal design  
When you do the kind of use which exceeds  $P_d$ , It may be happened to deteriorating IC original quality such as decrease of electric current ability with chip temperature rise. Do not exceed the power dissipation ( $P_d$ ) of the package specification rating under actual operation, and please design enough temperature margins.
- (4) Short-circuiting between terminals, and mismounting  
When mounting to pc board, care must be taken to avoid mistake in its orientation and alignment. Failure to do so may result in IC breakdown. Short-circuiting due to foreign matters entered between output terminals, or between output and power supply or GND may also cause breakdown.
- (5) Operation in Strong electromagnetic field  
Be noted that using the IC in the strong electromagnetic radiation can cause operation failures.
- (6) Inspection with the IC set to a pc board  
If a capacitor must be connected to the pin of lower impedance during inspection with the IC set to a pc board, the capacitor must be discharged after each process to avoid stress to the IC. For electrostatic protection, provide proper grounding to assembling processes with special care taken in handling and storage. When connecting to jigs in the inspection process, be sure to turn OFF the power supply before it is connected and removed.
- (7) Input to IC terminals  
This is a monolithic IC with  $P^+$  isolation between P-substrate and each element as illustrated below. This P-layer and the N-layer of each element form a P-N junction, and various parasitic element are formed.  
If a resistor is joined to a transistor terminal as shown in Fig 28.  
OP-N junction works as a parasitic diode if the following relationship is satisfied;  
GND > Terminal A (at resistor side), or GND > Terminal B (at transistor side); and  
Oif GND > Terminal B (at NPN transistor side),  
a parasitic NPN transistor is activated by N-layer of other element adjacent to the above-mentioned parasitic diode.  
The structure of the IC inevitably forms parasitic elements, the activation of which may cause interference among circuits, and/or malfunctions contributing to breakdown. It is therefore requested to take care not to use the device in such manner that the voltage lower than GND (at P-substrate) may be applied to the input terminal, which may result in activation of parasitic elements.
- (8) Ground wiring pattern  
If small-signal GND and large-current GND are provided, It will be recommended to separate the large-current GND pattern from the small-signal GND pattern and establish a single ground at the reference point of the set PCB so that resistance to the wiring pattern and voltage fluctuations due to a large current will cause no fluctuations in voltages of the small-signal GND. Pay attention not to cause fluctuations in the GND wiring pattern of external parts as well.
- (9) Thermal shutdown circuit  
A temperature control circuit is built in the IC to prevent the damage due to overheat. Therefore, the output is turned off when the thermal circuit works and is turned on when the temperature goes down to the specified level.  
But, built-in the IC a temperature control circuit to protect itself, and avoid the design used the thermal protection.
- (10) Over current protection circuit  
The over-current protection circuits are built in at output, according to their respective current outputs and prevent the IC from being damaged when the load is short-circuited or over-current. But, these protection circuits are effective for preventing destruction by unexpected accident. When it's in continuous protection circuit moving period don't use please. And for ability, because this chip has minus characteristic, be careful for heat plan.
- (11) There is a possibility to damage an internal circuit or the element when  $V_{in}$  and the voltage of each terminal reverse in the application. For instance,  $V_{in}$  is short-circuited to GND etc. with the charge charged to an external capacitor. Please use the capacitor of the output terminal with 1000 $\mu$ F or less. Moreover, the  $V_{in}$  series is recommended to insert the diode of the by-pass the diode of the backflow prevention or between each terminal and  $V_{in}$ .

## Notes

No copying or reproduction of this document, in part or in whole, is permitted without the consent of ROHM Co.,Ltd.

The content specified herein is subject to change for improvement without notice.

The content specified herein is for the purpose of introducing ROHM's products (hereinafter "Products"). If you wish to use any such Product, please be sure to refer to the specifications, which can be obtained from ROHM upon request.

Examples of application circuits, circuit constants and any other information contained herein illustrate the standard usage and operations of the Products. The peripheral conditions must be taken into account when designing circuits for mass production.

Great care was taken in ensuring the accuracy of the information specified in this document. However, should you incur any damage arising from any inaccuracy or misprint of such information, ROHM shall bear no responsibility for such damage.

The technical information specified herein is intended only to show the typical functions of and examples of application circuits for the Products. ROHM does not grant you, explicitly or implicitly, any license to use or exercise intellectual property or other rights held by ROHM and other parties. ROHM shall bear no responsibility whatsoever for any dispute arising from the use of such technical information.

The Products specified in this document are intended to be used with general-use electronic equipment or devices (such as audio visual equipment, office-automation equipment, communication devices, electronic appliances and amusement devices).

The Products specified in this document are not designed to be radiation tolerant.

While ROHM always makes efforts to enhance the quality and reliability of its Products, a Product may fail or malfunction for a variety of reasons.

Please be sure to implement in your equipment using the Products safety measures to guard against the possibility of physical injury, fire or any other damage caused in the event of the failure of any Product, such as derating, redundancy, fire control and fail-safe designs. ROHM shall bear no responsibility whatsoever for your use of any Product outside of the prescribed scope or not in accordance with the instruction manual.

The Products are not designed or manufactured to be used with any equipment, device or system which requires an extremely high level of reliability the failure or malfunction of which may result in a direct threat to human life or create a risk of human injury (such as a medical instrument, transportation equipment, aerospace machinery, nuclear-reactor controller, fuel-controller or other safety device). ROHM shall bear no responsibility in any way for use of any of the Products for the above special purposes. If a Product is intended to be used for any such special purpose, please contact a ROHM sales representative before purchasing.

If you intend to export or ship overseas any Product or technology specified herein that may be controlled under the Foreign Exchange and the Foreign Trade Law, you will be required to obtain a license or permit under the Law.

Thank you for your accessing to ROHM product informations.  
More detail product informations and catalogs are available, please contact us.
