LCM Number System

1. GENERAL DESCRIPTION

The JHB12232D is a 122 x 32 Dots Graphics LCD module. It has a STN panel composed of 122 segments and 32 commons. The LCM can be easily accessed by micro-controller via parallel interface.

2. FEATURES

Display Mode	Transflective and positive
	STN(Y-G) module
Display Format	Graphic 122 x 32 dots
Input Data	8-bit parallel data input from MPU
Multiplexing Ratio	1/32 Duty
Bias	1/6 Bias
Viewing Direction	6 O'clock
Backlight	LED(Y-G)
Driver IC	SBN1661 or substitute

3. MECHANICAL SPECIFICATION

Item	Specifications	Unit
Dimensional outline	76.4x29.0 x 5.7(max)	mm
Resolution	122segs x 32coms	dots
Viewing area	54.8(W) x 19.1(H)	mm
Active area	48.76(W) x 15.32(H)	mm
Dots pitch	0.4 (W)×0.45(H)	mm
Dots size	0.36(W)×0.41(H)	mm

5. MAXIMUM RATINGS

Item	Symbol	Min	Max	Unit	Note
Supply voltage	$V_{DD} - V_{SS}$	-0.3	7.0	V	
	V_{LCD}	-	13.0	V	
Input Voltage	V_{IN}	-0.3	$V_{DD}+0.3$	V	
Operating temperature	T_{OPR}	-20	+70	°C	
Storage temperature	T_{STR}	-30	+80	°C	
Humidity	---	---	90	%RH	

6. ELECTRICAL CHARACTERISTICS

Item		Symbol	Condition	Min.	Typ.	Max.	Unit
Supply Voltage	Logic	V_{DD}	---	---	5.0	5.5	V
Input Voltage	H level	V_{IH}	---	$V_{DD}-2.2$	---	V_{DD}	V
	L level	V_{IL}		V_{SS}	---	$0.8V_D$	
Current Consumption (LCD DRIVER)		I_{DD}	$V_{DD}=5.0V$; $V_{LCD}=4.5V, T_{amb}=25^{\circ}C$;	---	---	0.5	mA
LCD Driving Voltage		V_{LCD}	Bias=1/5 $V_{LCD}=V_{DD}-V_O$	4.3	4.5	4.7	V
Power Supply for LED		V_f	$I_f=100mA$	4.8	5.0	5.2	V
Current Consumption (With LED BackLight)		I_f	$V_{DD}=5.0V$; $V_f=5.0V, T_{amb}=25^{\circ}C$;	---	100	120	mA

7. MODULE FUNCTION DESCRIPTION

7.1. PIN DESCRIPTION

Pin No.	Symbol	Description
1	VDD	Power supply for positive (5.0V)
2	VSS	Power supply for Ground (0V)
3	VLCD	LCD driver voltage regulation terminal
4	RES	Reset signal input pin, Low level is active
5	E1	Read/write enable signal input pin
6	E2	
7	RW	Read/write selection signal, R/W="H": Read; R/W="L": Write
8	A0	Data/command signed select, RS="H": Data; RS="L": Command
9	D0	8-bit bi-directional data bus
10	D1	
11	D2	
12	D3	
13	D4	
14	D5	
15	D6	
16	D7	
17	LED _A	Backlight power supply voltage for positive
18	LED _K	Backlight power supply voltage for negative

7.2 TIMING CHARACTERISTICS

1. SYSTEM BUS READ/WRITE CHARACTERISTIC

System Bus Read/Write I (80-family MPU)

$T_a = -20$ to 75°C , $V_{ss} = -5.0\text{V} \pm 10\%$

Parameter	Symbol	Signal	Condition	Min	Typ	Max	Unit
Address hold time	tAH8	A0, \overline{CS}		10	—	—	ns
Address setup time	tAW8			20	—	—	ns
System cycle time	tCYC8	\overline{WR} , \overline{RD}		1000	—	—	ns
Control pulse width	tCC			200	—	—	ns
Data setup time	tDS8	D0 – D7	CL = 100 pF	80	—	—	ns
Data hold time	tDH8			10	—	—	ns
\overline{RD} access time	tACC8			—	—	90	ns
Output disable time	tOH8			10	—	60	ns

*1 Each of the values where $V_{ss} = -3.0\text{V}$ is about 200% of that where $V_{ss} = -5.0\text{V}$ (i.e., the listed value).

*2 The rise or fall time of input signals should be less than 15 ns.

System bus read/write I (80-family MPU)

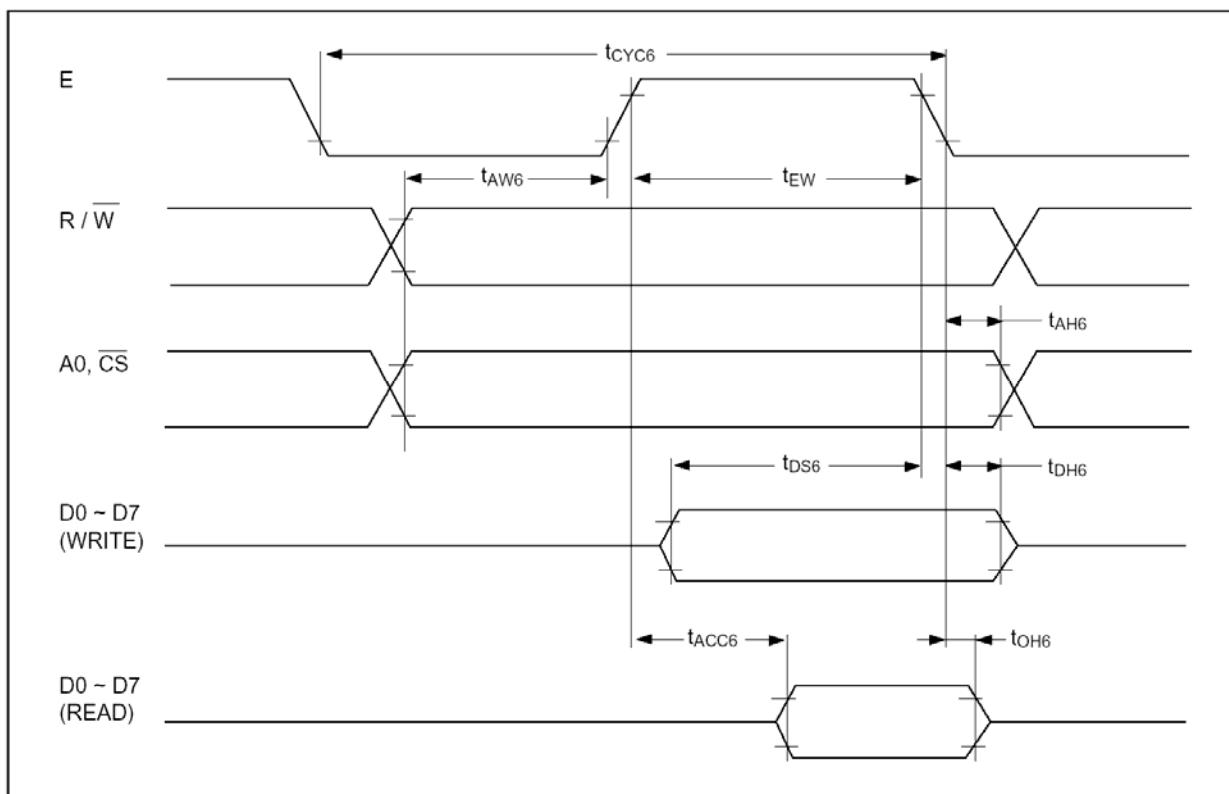

**System Bus Read/Write II (68-family MPU)** $T_a = -210 \text{ to } 75^\circ\text{C}$, $V_{SS} = -5.0\text{V} \pm 10\%$

Parameter	Symbol	Signal	Condition	Min	Typ	Max	Unit
System cycle time	tCYC6 ^{*1}	A0, \overline{CS}	CL = 100 pF	1000	—	—	ns
Address setup time	tAW6	R/ \overline{W}		20	—	—	ns
Address hold time	tAH6			10	—	—	ns
Data setup time	tDS6	D0 – D7		80	—	—	ns
Data hold time	tDH6			10	—	—	ns
Output disable time	tOH6			10	—	60	ns
Access time	tACC6			—	—	90	ns
Enable pulse width: Read	tEW	E		100	—	—	ns
Enable pulse width: Write				80	—	—	ns

*1 t_{CYC6} indicates the cycle time during which $\overline{CS} \cdot E = "H"$. It does not mean the cycle time of signal E.

*2 Each of the values where $V_{SS} = -3.0\text{V}$ is about 200% of that where $V_{SS} = -5.0\text{V}$ (i.e., the listed value).

*3 The rise or fall time of input signals should be less than 15 ns.

System bus read/write II (68-family MPU)

2. DISPLAY CONTROL OUTPUT TIMING

Input Timing

$T_a = -20 \text{ to } 75^\circ\text{C}$, $V_{SS} = -5.0\text{V} \pm 10\%$

Parameter	Symbol	Signal	Condition	Min	Typ	Max	Unit
Low level pulse width	t_{WLCL}	CL		35	—	—	μs
High level pulse width	t_{WHCL}			35	—	—	μs
Rise time	t_r			—	30	150	ns
Fall time	t_f			—	30	150	ns
FR delay time	t_{DFR}	FR		-2.0	0.2	2.0	μs

Output Timing

$T_a = -20 \text{ to } 75^\circ\text{C}$, $V_{SS} = -5.0\text{V} \pm 10\%$

Parameter	Symbol	Signal	Condition	Min	Typ	Max	Unit
FR delay time	t_{DFR}	FR	CL = 100 pF	—	0.2	0.4	μs

*1. The listed FR input delay time applies to the SED1521 and 1520 (slave).

The listed FR output delay time applies to the SED1520 (master).

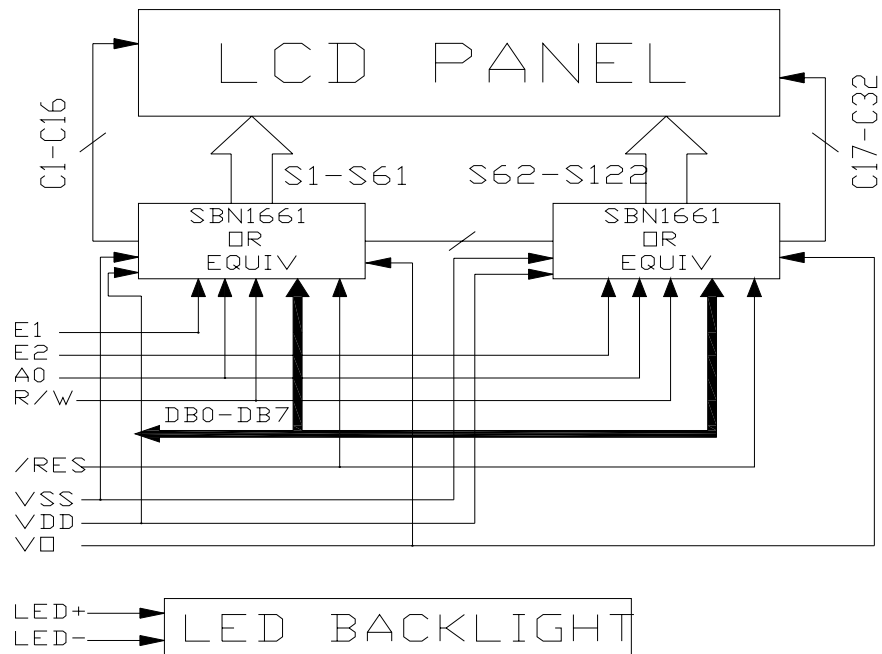

*2. Each of the values where $V_{SS} = -3.0\text{V}$ is about 200% of that where $V_{SS} = -5.0\text{V}$ (i.e., the listed value).

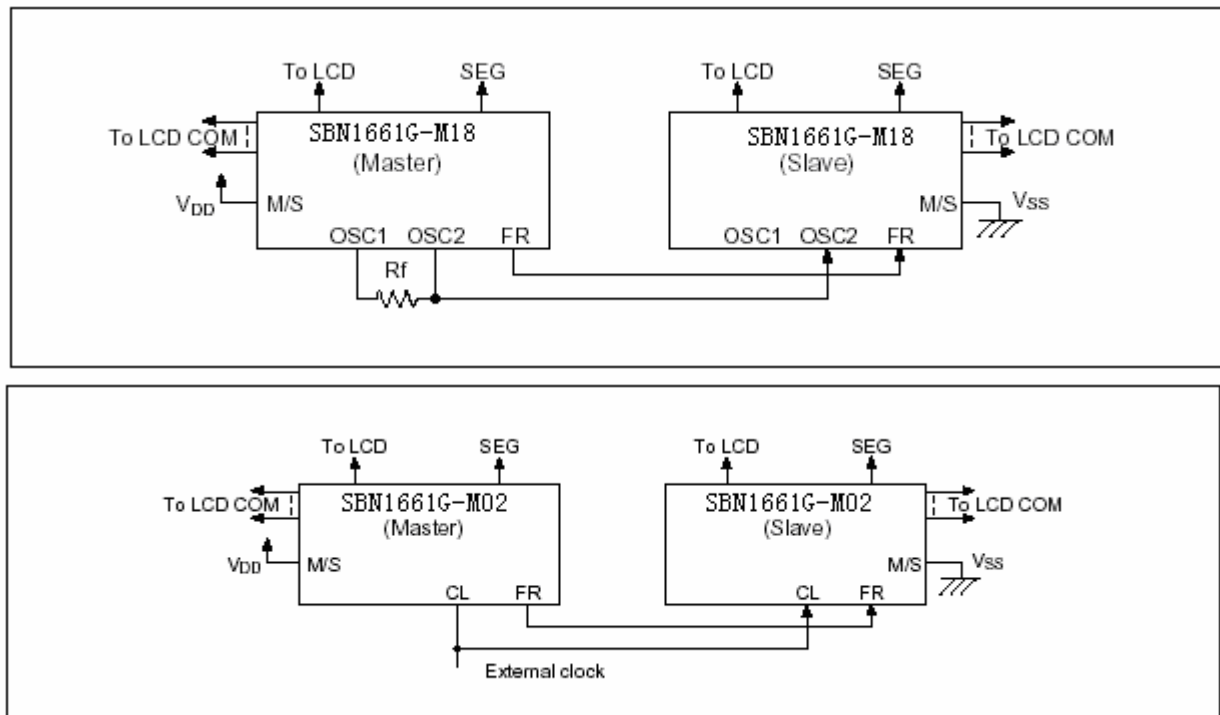

Display control timing

7.3 APPLICATION OF LCM

■Circuit Block Diagram

■Reference circuit

7.4 TABLE OF COMMAND

Table lists the commands used with the SBN1661. This LSI uses a combination of A0, R/W, (\overline{RD} , \overline{WR}) to identify a data bus signal. Interpretation and execu-

tion of a command depends not on external clock but on internal timing alone. Therefore, a command can be executed so fast that no busy check is needed.

Table Commands

	Command	Code											Function	
		A0	\overline{RD}	\overline{WR}	D7	D6	D5	D4	D3	D2	D1	D0		
(1)	Display ON/OFF	0	1	0	1	0	1	0	1	1	1	0/1	Turns all display on or off, independently of display RAM data or internal status. 1: ON 0: OFF (Power-saving mode with static drive on)*	
(2)	Display Start Line	0	1	0	1	1	0	Display Start Address (0 – 31)				Specifies RAM line corresponding to uppermost line (COM0) of display.		
(3)	Set Page Address	0	1	0	1	0	1	1	1	0	Page [0–3]		Sets display RAM page in page address register.	
(4)	Set Column (Segment) Address	0	1	0	0	Column Address (0–79)							Sets display RAM column address in column address register.	
(5)	Read Status	0	0	1	Busy	ADC	ON/OFF	RESET	0	0	0	0	Reads the following status: BUSY 1: Internal operation 0: Ready ADC 1: CW output (forward) 0: CCW output (reverse) ON/OFF 1: Display off 0: Display on RESET 1: Being reset 0: Normal	
(6)	Write Display Data	1	1	0					Write Data					Writes data from data bus into display RAM.
(7)	Read Display Data	1	0	1	Read Data							Reads data from display RAM onto data bus.		
(8)	Select ADC	0	1	0	1	0	1	0	0	0	0	0/1	Used to invert relationship of assignment between display RAM column addresses and segment driver outputs. 0: CW output (forward) 1: CCW output (reverse)	
(9)	Static Drive ON/OFF	0	1	0	1	0	1	0	0	1	0	0/1	Selects normal display or static driving operation. 1: Static drive (power-saving mode) 0: Normal driving	
(10)	Select Duty	0	1	0	1	0	1	0	1	0	0	0/1	Selects LCD cell driving duty 1: 1/32 0: 1/16	
(11)	Read Modify Write	0	1	0	1	1	1	0	0	0	0	0	Increments column address counter by 1 when display data is written. (This is not done when data is read.)	
(12)	End	0	1	0	1	1	1	0	1	1	1	0	Clears read modify write mode.	
(13)	Reset	0	1	0	1	1	1	0	0	0	1	0	Sets display start line register on the first line. Also sets column address counter and page address counter to 0.	

* With display off (command (1)), static drive going on (9) invokes power-saving mode.

A detailed description of all the commands follows.

8. ELECTRO-OPTICAL CHARACTERISTICS

Item	Symbol	Condition	Temp	Min	Typ.	Max	Units	Note
LCD driving voltage	V_{LCD}	$\theta = \phi = 0$	0°C	-	4.7	-	V	NOTE1
			25°C	4.2	4.5	4.7		
			50°C	-	4.3	-		
Response Time	Rise Time (Tr)	$\theta = \phi = 0$	0°C	---	---	--	msec	NOTE2
	Decay Time (Tf)			---	----	---		
	Rise Time (Tr)		25°C	---	225	340		
	Decay Time (Tf)			---	240	360		
	Rise Time (Tr)		50°C	---	---	--		
	Decay Time (Tf)			---	---	--		
Contrast Ratio	Cr	$\theta = \phi = 0$	25°C	5	10	---	---	NOTE4

Viewing Angle Range	$\theta (\phi = 0^\circ)$ (6'')	$\phi = 90^\circ$ (3'')	$\phi = 180^\circ$ (12'')	$\phi = 270^\circ$ (9'')	備註
$\theta (25^\circ\text{C})$ CR \geq 2	45	35	30	20	Deg NOTE3

● For panel only

• **Note 2. Definition of Optical Response Time :**

• **Note 3. Definition of Viewing Angle θ and ϕ :**

• **Note 4. Definition of Contrast ratio(CR) :**

$$CR = \frac{\text{Brightness of Non-selected Segment (B2)}}{\text{Brightness of Selected Segment (B1)}}$$

9. RELIABILITY

9.1. MTBF

The LCD module shall be designed to meet a minimum MTBF value of 30000 hours with normal. (25°C in the room without sunlight)

9.2. TESTS

NO.	ITEM	CONDITION	CRITERION
1	High Temperature Operating	70°C 120Hrs	<ul style="list-style-type: none"> ◦ No Defect Of Operational Function In Room Temperature Are Allowable. ◦ IDD of LCM in Pre-and post-test should follow specification
2	Low Temperature Operating	-20°C 120Hrs	
3	High Temperature/ Humidity Non-Operating	60°C ,90%RH ,120 Hrs	
4	High Temperature Non-Operating	80°C 120Hrs	
5	Low Temperature Non-Operating	-30°C 120Hrs	
6	Temperature Cycling Non-Operating	-20°C (30Min)↔ 60°C (30Min) 10 CYCLES	

Notes: Judgments should be made after exposure in room temperature for two hours.

10. PRECAUTIONS FOR USING LCD MODULES

10.1. HANDLING PRECAUTIONS

- (1) The display panel is made of glass. Do not subject it to a mechanical shock or impact by dropping it.
- (2) If the display panel is damaged and the liquid crystal substance leaks out, be sure not to get any in your mouth. If the substance contacts your skin or clothes, wash it off using soap and water.
- (3) Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.
- (4) The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.
- (5) If the display surface becomes contaminated, breathe on the surface and gently wipe it with a soft dry cloth. If it is heavily contaminated, moisten a cloth with one of the following solvents:
 - Isopropyl alcohol
 - Ethyl alcohol
- (6) Solvents other than those above mentioned may damage the polarizer.
Especially, do not use the following:
 - Water
 - Ketone
 - Aromatic solvents
- (7) Extra care to minimize corrosion of the electrode. Water droplets, moisture condensation or a current flow in a high-humidity environment accelerates corrosion of the electrode.
- (8) Install the LCD Module by using the mounting holes. When mounting the LCD Module, make sure it is free of twisting, warping and distortion. In particular, do not forcibly pull or bend the I/O cable or the backlight cable.
- (9) Do not attempt to disassemble or process the LCD Module.
- (10) NC terminal should be open. Do not connect anything.
- (11) If the logic circuit power is off, do not apply the input signals.
- (12) To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
 - Be sure to ground the body when handling the LCD Module.
 - Tools required for assembling, such as soldering irons, must be properly grounded.
 - To reduce the amount of static electricity generated, do not conduct assembling and other work under dry conditions.

-The LCD Module is coated with a film to protect the display surface. Exercise care when peeling off this protective film since static electricity may be generated.

10.2. STORAGE CONDITIONS

When storing, avoid the LCD module to be exposed to direct sunlight of fluorescent lamps. For stability, to keep it away from high temperature and high humidity environment (The best condition is : $23\pm5^{\circ}\text{C}$, $45\pm20\%\text{RH}$). ESD protection is necessary for long-term storage also.

10.3. OTHERS

Liquid crystals solidify under low temperature (below the storage temperature range) leading to defective orientation or the generation of air bubbles (black or white). Air bubbles may also be generated if the module is subject to a low temperature.

If the LCD Module have been operating for a long time showing the same display patterns the display patterns may remain on the screen as ghost images and a slight contrast irregularity may also appear. A normal operating status can be recovered by suspending use for some time. It should be noted that this phenomenon does not adversely affect performance reliability.

To minimize the performance degradation of the LCD Module resulting from destruction caused by static electricity etc. exercise care to avoid holding the following sections when handling the modules.

- Exposed area of the printed circuit board.
- Terminal electrode sections.

11. Using LCD modules

11.1 LIQUID CRYSTAL DISPLAY MODULES

LCD is composed of glass and polarizer. Pay attention to the following items when handling.

- (1) Please keep the temperature within specified range for use and storage. Polarization degradation, bubble generation or polarizer peel-off may occur with high temperature and high humidity.
- (2) Do not touch, push or rub the exposed polarizers with anything harder than a HB pencil lead (glass, tweezers, etc).
- (3) N-hexane is recommended for cleaning the adhesives used to attach front/rear polarizers and reflectors made of organic substances, which will be damaged by chemicals such as acetone, toluene, ethanol and isopropyl alcohol.
- (4) When the display surface becomes dusty, wipe gently with absorbent cotton or other soft material like chamois soaked in petroleum ether. Do not scrub hard to avoid damaging the display surface.
- (5) Wipe off saliva or water drops immediately, contact with water over a long period of time may cause deformation or color fading.
- (6) Avoid contacting oil and fats.
- (7) Condensation on the surface and contact with terminals due to cold will damage, stain or polarizers. After products are tested at low temperature they must be warmed up in a container before coming in contact with room temperature air.
- (8) Do not put or attach anything on the display area to avoid leaving marks on.
- (9) Do not touch the display with bare hands. This will stain the display area and degrade insulation between terminals (some cosmetics are determinate to the polarizers).
- (10) As glass is fragile, it tends to become chipped during handling especially on the edges. Please avoid dropping or jarring.

11.2 INSTALLING LCD MODULE

Attend to the following items when installing the LCM.

- (1) Cover the surface with a transparent protective plate to protect the polarizer and LC cell.
- (2) When assembling the LCM into other equipment, the spacer to the bit between the LCM and the fitting plate should have enough height to avoid causing stress to the module surface, refer to the individual specifications for measurements. The measurement tolerance should be $\pm 0.1\text{mm}$.

11.3 ELECTRO-STATIC DISCHARGE CONTROL

Since this module uses a CMOS LSI, the same careful attention should be paid for electrostatic discharge as for an ordinary CMOS IC.

- (1) Make certain that you are grounded when handing LCM.
- (2) Before removing LCM from its packing case or incorporating it into a set, be sure the module and your body have the same electric potential.
- (3) When soldering the terminal of LCM, make certain the AC power source for the soldering iron does not leak.
- (4) When using an electric screwdriver to attach LCM, the screwdriver should be of ground potentiality to minimize as much as possible any transmission of electromagnetic waves produced sparks coming from the commutator of the motor.
- (5) As far as possible, make the electric potential of your work clothes and that of the workbenches to the ground potential.
- (6) To reduce the generation of electro-static discharge, be careful that the air in the work is not too dried. A relative humidity of 50%-60% is recommended.

11.4 PRECAUTIONS FOR OPERATION

- (1) Viewing angle varies with the change of liquid crystal driving voltage (V_o). Adjust V_o to show the best contrast.
- (2) Driving the LCD in the voltage above the limit will shorten its lifetime.
- (3) Response time is greatly delayed at temperature below the operating temperature range. However, this does not mean the LCD will be out of the order. It will recover when it returns to the specified temperature range.
- (4) If the display area is pushed hard during operation, the display will become abnormal. However, it will return to normal if it is turned off and then on.
- (5) Condensation on terminals can cause an electrochemical reaction disrupting the terminal circuit. Therefore, this product must be used and stored within the specified condition of $23\pm5^{\circ}\text{C}$, $45\pm20\%\text{RH}$.
- (6) When turning the power on, input each signal after the positive/negative voltage becomes stable.

11.5 SAFETY

- (1) It is recommended to crush damaged or unnecessary LCDs into pieces and wash them off with solvents such as acetone and ethanol, which should later be burned.
- (2) If any liquid leaks out of a damaged glass cell and comes in contact with the hands, wash off thoroughly with soap and water.

12. REVISION HISTORY

Version	Revise record	Date
1.0	Original version	07-09-15
2.0	Change LCM configuration with PCB	09-04-15
3.0	Change the ic from SED1520 to SBN1661G-M18	09-12-03
3.01	Perfect the VER3.0 spec, Commany internal modify.	13-08-01
